What is Scopus?

Scopus is Elsevier's abstract and citation database launched in 2004. Scopus covers nearly **36,377 titles** (22,794 active titles and 13,583 inactive titles) from approximately 11,678 publishers, of which 34,346 are peer-reviewed journals in top-level subject fields: life sciences, social sciences, physical sciences and health sciences. It covers three types of sources: **book series, journals, and trade journals**. All journals covered in the Scopus database, regardless of who they are published under, are reviewed each year to ensure high quality standards are maintained. Searches in Scopus also incorporate searches of patent databases. Scopus gives four types of quality measure for each title; those are h-Index, CiteScore, SJR (**SCImago Journal Rank**) and SNIP (Source Normalized Impact per Paper).

From Wikipedia, the free encyclopedia

This article is about the index of scientific research impact. For the economic measure, see [Herfindahl–Hirschman Index](#).

The **h-index** is an [author-level metric](#) that measures both the [productivity](#) and [citation impact](#) of the [publications](#) of a [scientist](#) or scholar. The *h-index* correlates with obvious success indicators such as winning the [Nobel Prize](#), being accepted for research fellowships and holding positions at top universities.^[1] The index is based on the set of the scientist's most cited papers and the number of citations that they have received in other publications. The index can also be applied to the productivity and impact of a [scholarly journal](#)^[2] as well as a group of scientists, such as a department or university or country.^[3] The index was suggested in 2005 by [Jorge E. Hirsch](#), a physicist at UC San Diego, as a tool for determining [theoretical physicists'](#) relative quality^[4] and is sometimes called the **Hirsch index** or **Hirsch number**.

Improved Citescore

We have updated the CiteScore methodology to ensure a more robust, stable and comprehensive metric which provides an indication of research impact, earlier. The updated methodology will be applied to the calculation of CiteScore, as well as retroactively for all previous CiteScore years (ie. 2018, 2017, 2016...). The previous CiteScore values have been removed and are no longer available. [View CiteScore methodology.](#)

Current Chemical Reactions and Index Chemicus

Current Chemical Reactions and Index Chemicus™ provide deep chemical structure and reaction indexing. An integrated chemical drawing tool lets you draw compounds and structures to search with precision, while integration with Web of Science Core Collection provides seamless citation navigation and ensures resource quality.

Web of Science: Social Sciences Citation Index

- *Social Sciences Citation Index* contains over 3,400 journals across 58 social sciences disciplines, as well as selected items from 3,500 of the world's leading scientific and technical journals. More than 9.37 million records and 122 million cited references date back from 1900 to present.
- Web of Science Group in-house editors use a single set of 28 criteria throughout the journal selection and curation process. Divided into 24 'quality' criteria and four 'impact' criteria, editors select the most influential journals in their respective fields (using citation activity as the primary indicator of impact) for the *Social Sciences Citation Index*.

What is Publons?

- Publons is a commercial website that provides a free service for academics to track, verify, and showcase their peer review and editorial contributions for academic journals. It was launched in 2012 and by 2018 more than 500,000 researchers have joined the site, adding more than one million reviews across 25,000 journals.
- Publons' mission is to "speed up science by harnessing the power of peer review". Publons claims that by turning peer review into a measurable research output, academics can use their review and editorial record as evidence of their standing and influence in their field. Publons says its business model is based on partnering with publishers.
- Publons produces a verified record of a person's review and editorial activity for journals. This evidence is showcased on reviewers' online profiles and can be downloaded to include in CVs, funding and job applications, and promotion and performance evaluations.
- Reviewers can choose whether or not to make the content of their reviews open access following publication of the reviewed publication, though journals can choose to override this. Review content is shared using a Creative Commons CC BY 4.0 license. Publons has partnerships with major publishers, including Springer Nature, Taylor and Francis, Oxford University Press, BMJ, SAGE, Wiley and more, and with related services such as Altmetric and ORCID.

Title of your research article

*(Writing the title and abstract for a research paper: Being concise, precise, and meticulous is the key
Milind S. Tullu)*

1. This article deals with formulating a suitable title and an appropriate abstract for an original research paper.
2. The “title” and the “abstract” are the “initial impressions” of a research article, and hence they need to be drafted correctly, accurately, carefully, and meticulously. Often both of these are drafted after the full manuscript is ready.
3. Most readers read only the title and the abstract of a research paper and very few will go on to read the full paper.

4. The title and the abstract are the most important parts of a research paper and should be pleasant to read.
5. The “title” should be descriptive, direct, accurate, appropriate, interesting, concise, precise, unique, and should not be misleading. The “abstract” needs to be simple, specific, clear, unbiased, honest, concise, precise, stand-alone, complete, scholarly, (preferably) structured, and should not be misrepresentative.
6. The abstract should be consistent with the main text of the paper, especially after a revision is made to the paper and should include the key message prominently. It is very important to include the most important words and terms (the “keywords”) in the title and the abstract for appropriate indexing purpose and for retrieval from the search engines and scientific databases. Such keywords should be listed after the abstract.
7. One must adhere to the instructions laid down by the target journal with regard to the style and number of words permitted for the title and the abstract.

CO-HOSTS Announcements and News

Paper Submission and Publication

The authors are invited to submit their full papers by ~~July 12, 2020~~ **July 27, 2020 (firm deadline)**. The submissions will be peer-reviewed for originality and scientific quality. As done in previous editions, the proceedings of [IUKM 2020](#) will be published by Springer-Verlag in the Lecture Notes in Artificial Intelligence series, and be available at the Symposium. Authors are requested to prepare their papers in the [Springer format](#). Submissions should not exceed 12 pages and must be submitted as PDF electronically through the conference's [EasyChair submission page](#). Please visit [here](#) for details.

IUKM 2020 Special Issues will be announced on this page later. Special Issues of previous IUKM conferences (IUM 2010, IUKM 2015, IUKM 2016, IUKM 2018) have been/will be published in [Annals of Operations Research](#) and [International Journal of Approximate Reasoning](#).

An Input–Output Analysis of Sectoral Specialization and Trade Integration of the Western Balkans Economies

Economies

Economies (ISSN 2227-7099) is an international, scholarly, peer-reviewed, open access journal of development economics and macroeconomics, published quarterly online by MDPI.

- Open Access** — free for readers, with article processing charges (APC) paid by authors or their institutions.
- High Visibility:** indexed within Scopus, ESCI (Web of Science), EconLit, EconBiz, RePEc, and many other databases.
- Journal Rank:** CiteScore - Q2 (*Economics, Econometrics and Finance*)
- Rapid Publication:** manuscripts are peer-reviewed and a first decision provided to authors approximately 26.5 days after submission; acceptance to publication is undertaken in 7.6 days (median values for papers published in this journal in the second half of 2020).

China's Outward Foreign Direct Investment in the Greater Mekong Subregion

Nisit Panthamit^{1*}, Chukiat Chaiboonsri¹
¹Chiang Mai University, Thailand

Abstract This article identifies the main determinants of China's outward foreign direct investment (OFDI) activities with Greater Mekong Subregion (GMS) countries, namely, Cambodia, Lao, Myanmar, Vietnam, and Thailand during the period between 2007 and 2016. We established the Bayesian panel data approach combination. The results of this study show that a higher economic growth rate, gross domestic product,

Abstract: The main reason for using Bayesian approach and Pickands's dependent function for prediction and estimation in this research is the beginning of the multiplex econometric methods. The multiplex econometric examination resulted that predictive value of the minimum index points on real-time for five stock markets consisting of SGX, KLSSE, SET, IDX, and PSE. Comparison of the previous examples should illustrate the wide range of gain or loss values related resulting from changing factors on the economic stimulus policy before the potential occurrence of financial crisis after 2015. As indicated previously, the majority results are only as good as the input data from the selected period, 1987–2015. The results of this research may use to be a signal to present the financial disorder in five ASEAN Exchange markets involving an economic weakening. Moreover, it would be used to guide the defining of any policy for protection of financial disorders.

Keywords: Shemitah year; extreme case; ASEAN stock exchange; Bayesian approach; prediction; lowest set index; financial crisis.

Abstract PDF

Abstract

This research was conducted to identify foreign currencies traded against the US dollar. A research question is how foreign currencies are traded in the case of bivariate extreme values that can bring perfect balance phenomenon and harmony in which the currency is recognised as currency appreciation or depreciation in value. Dependent structure and co-movement between daily data of Malaysian Ringgit (MYR) and Thai Baht (THB) during the period 2006-2013 were investigated. The Akaike information criterion (AIC) and Bayesian information criterion (BIC) straightforward model selection confirmed that the elliptical copula fit for both currencies recognised currency appreciation or depreciation in value. The calculations based on the BEVA demonstrate there is harmonious dependence and balance phenomenon between MYR and THB against the US dollar. Finally, a developed multi-model approach to dependence modelling for variations in the price of a currency known as currency appreciation or depreciation meets the predictable needs of new financial opportunities and policy challenges.
